Date: 2023-09-23

Aim:

Write a java program to demonstrate operator precedence and associativity **Source Code:**

```
OperatorPrecedence.java

import java.util.Scanner;
class OperatorPrecedence{
    public static void main(String[] args){
        int x,result;
        System.out.print("Enter a num: ");
        Scanner sc=new Scanner(System.in);
        x=sc.nextInt();
        result=x++ +x++*--x/x++ - --x+3>>1 | 2;
        System.out.println("The operation going is x++ + x++ * --x / x++ - --x + 3 >> 1 | 2");
        System.out.println("result = "+result);
    }
}
```

Execution Results - All test cases have succeeded!

```
Test Case - 1

User Output

Enter a num:
4

The operation going is x++ + x++ * --x / x++ - --x + 3 >> 1 | 2

result = 3
```

```
Test Case - 2

User Output

Enter a num:
-3

The operation going is x++ + x++ * --x / x++ - --x + 3 >> 1 | 2
result = 2
```

write a java program that uses if-else control statement and print the result **Source Code:**

```
Control.java
import java.util.Scanner;
class Control{
        public static void main(String args[]){
                int x,y,z;
                Scanner sc = new Scanner(System.in);
                System.out.print("Enter first num : ");
                x=sc.nextInt();
                System.out.print("Enter second num : ");
                y=sc.nextInt();
                z=x+y;
                if(z<20){
                        System.out.println("x + y is less than 20");
                }
                else{
                        System.out.println("x + y is greater than 20");
                }
        }
```

Execution Results - All test cases have succeeded!

```
Test Case - 1
User Output
Enter first num :
13
Enter second num :
x + y is less than 20
```

```
Test Case - 2
User Output
Enter first num :
24
Enter second num :
10
x + y is greater than 20
```

Exp. Name: Sample Program to demonstrate S.No: 3 Date: 2023-09-23 constructor

Aim:

Write a program to demonstrate constructor class

Source Code:

```
Student.java
class Student{
        int num;
        String name;
        //method to display the value of num and name
        void display(){
                System.out.println(num+" "+name);
        public static void main(String args[]){
               //creating objects
                Student s1=new Student();
                Student s2=new Student();
                //displaying values of the object
                s1.display();
                s2.display();
        }
}
```

Execution Results - All test cases have succeeded!

```
Test Case - 1
User Output
0 null
0 null
```

Write Java program on use of Inheritance.

Create a classVehicle

• contains the data members color of String type and speed and size of integer data type.

Exp. Name: A program to illustrate Inheritance

• write a methodsetVehicleAttributes()to initialize the data members

Create another classCarwhich is derived from the classVehicle

- · contains the data membersccandgearsofintegerdata type
- · write a methodsetCarAttributes()to initialize the data members
- write a methoddisplayCarAttributes()which will display all the attributes.

Write another class InheritanceDemo with main() it receives five arguments color, speed, size, cc and gears. Source Code:

```
InheritanceDemo.java
import java.util.Scanner;
class Vehicle{
        String color;
        int speed;
        int size;
        void setVehicleAttributes(String c,String s,String sp){
                color = c;
                speed = Integer.parseInt(s);
                size = Integer.parseInt(sp);
class Car extends Vehicle{
        int CC;
        int gears;
        void setCarAttributes(String c,String s,String sp,String cce,String gear){
                setVehicleAttributes(c,s,sp);
                CC = Integer.parseInt(cce);
                gears = Integer.parseInt(gear);
                displayCarAttributes();
        void displayCarAttributes(){
                System.out.println("Color of Car : "+color);
                System.out.println("Speed of Car : "+speed);
                System.out.println("Size of Car : "+size);
                System.out.println("CC of Car : "+CC);
                System.out.println("No of gears of Car : "+gears);
        }
public class InheritanceDemo{
        public static void main(String args[])
                Car b1 = new Car();
                b1.setCarAttributes(args[0],args[1],args[2],args[3],args[4]);
        }
}
```

Execution Results - All test cases have succeeded!

Test Case - 1	
User Output	
Color of Car : Blue	
Speed of Car : 100	
Size of Car : 20	
CC of Car : 1000	
No of gears of Car : 5	

Test Case - 2
User Output
Color of Car : Orange
Speed of Car : 120
Size of Car : 25
CC of Car : 900
No of gears of Car : 5

ID: 224G1A0502 Page No: 16

write a java program to prevent inheritance using abstract class.

- Create an abstract class Shape
- Create a class Rectangle which extends the class Shape
- · Class Rectangle contains a method draw which prints drawing rectangle
- Create another class circle1 which extends Shape
- · Class circle1 contains a method draw which prints drawing circle
- Create a main class TestAbstraction1
- · Create object for the class circle1 and called the method draw

Source Code:

```
TestAbstraction1.java
abstract class shape{
        abstract void draw();
}
class Rectangle extends shape
{
        void draw()
                System.out.println("drawing rectangle");
class Circle1 extends shape
        void draw()
                System.out.println("drawing circle");
}
class TestAbstraction1{
        public static void main(String args[])
        {
                shape s= new Circle1();
                s.draw();
        }
}
```

Execution Results - All test cases have succeeded!

```

}
```

Execution Results - All test cases have succeeded!

Test Case - 1

User Output

Bike is running safely

ID: 224G1A0502 Page No: 20

Write a Java program that implements an interface.

Create an interface called Car with two abstract methods <a href="String getName("String get

```
In the same interface include a static method <u>Car getFastestCar(Car car1, Car car2)</u>, which returns car1 if the maxSpeed of car1 is greater than or equal to that of car2, else should return car2.
```

Create a class called BMW which implements the interface Car and provides the implementation for the abstract methods **getName()** and **getMaxSpeed()** (make sure to declare the appropriate fields to store **name** and **maxSpeed** and also the constructor to initialize them).

Similarly, create a class called Audi which implements the interface Car and provides the implementation for the abstract methods getName() and getMaxSpeed() (make sure to declare the appropriate fields to store name and maxSpeed and also the constructor to initialize them).

Create a public class called MainApp with the main() method.

Take the input from the command line arguments. Create objects for the classes (BMW) and (Audi) then print the fastest car.

Note:

Java 8 introduced a new feature called default methods or defender methods, which allow developers to add new methods to the interfaces without breaking the existing implementation of these interface. These default methods can also be overridden in the implementing classes or made abstract in the extending interfaces. If they are not overridden, their implementation will be shared by all the implementing classes or sub interfaces.

Below is the syntax for declaring a default method in an interface :

```
public default void methodName() {
    System.out.println("This is a default method in interface");
}
```

Similarly, **Java 8** also introduced <u>static</u> methods inside interfaces, which act as regular static methods in classes. These allow developers group the utility functions along with the interfaces instead of defining them in a separate helper class.

Below is the syntax for declaring a static method in an interface:

```
public static void methodName() {
    System.out.println("This is a static method in interface");
}
```

Note: Please don't change the package name.

Source Code:

q11284/MainApp.java

ID: 224G1A0502 Page No: 22

```
package q11284;
interface Car {
        abstract String getName();
        abstract int getMaxSpeed();
        public default void applyBreak()
        {
                System.out.println("Applying break on "+getName());
        }
        public static Car getFastestCar(Car car1,Car car2)
                if(car1.getMaxSpeed()>=car2.getMaxSpeed())
                        return car1;
                else
                        return car2;
        }
class BMW implements Car {
        String name;
        int speed;
        public BMW(String n,String s){
                speed=Integer.parseInt(s);
                name=n;
        public String getName(){
                return name;
        public int getMaxSpeed(){
                return speed;
        }
class Audi implements Car {
        String name;

	S.No: 24	Exp. Name: program to create a super class called Figure that it returns the area of a rectangle and triangle	Date: 2023-11-05
--	----------	--	------------------

Write a java program to create a super class called Figure that receives the dimensions of two dimensional objects. It also defines a method called area that computes the area of an object. The program derives two subclasses from Figure. The first is Rectangle and second is Triangle. Each of the sub classes override area() so that it returns the area of a rectangle and triangle respectively

Source Code:

AbstractAreas.java

ID: 224G1A0502 Page No: 38

```
Srinivasa Ramanujan Institute of Technology 2022-2026-CSE-A
```

```
import java.util.*;
abstract class Figure{
        double dim1:
        double dim2;
        double dim3;
        double dim4;
        Figure(double a, double b){
                dim1=a;
                dim2=b;
                dim3=a;
                dim4=b;
        }

S.No: 25	Exp. Name: Write a Java program demonstrating the usage of Threads	Date: 2023-12-31
----------	--	------------------

Write a Java program that uses three threads to perform the below actions:

- 1. First thread should print "Good morning" for every 1 second for 2 times
- 2. Second thread should print "Hello" for every 1 seconds for 2 times
- 3. Third thread should print "Welcome" for every 3 seconds for 1 times

Write appropriate **constructor** in the **Printer** class which implements **Runnable** interface to take three arguments: **message**, **delay** and **count** of types **String**, **int** and **int** respectively.

Write code in the Printer.run() method to print the **message** with appropriate **delay** and for number of times mentioned in **count**.

Write a class called ThreadDemo with the main() method which instantiates and executes three instances of the above mentioned Printer class as threads to produce the desired output.

[Note: If you want to sleep for 2 seconds you should call Thread.sleep(2000); as the Thread.sleep(...) method takes milliseconds as argument.]

Note: Please don't change the package name.

Aim

Use inheritance to create an exception superclass called Exception A and exception subclasses Exception B and Exception C, where Exception B inherits from Exception A and Exception C inherits from Exception B. Write a java program to demonstrate that the catch block for type Exception A catches the exception of type Exception B and Exception C.

Note: Please don't change the package name.

Source Code:

q29793/TestException.java

ID: 224G1A0502 Page No: 47

```
package q29793;
import java.lang.*;
@SuppressWarnings("serial")
class ExceptionA extends Exception {
        String message;
        public ExceptionA(String message) {
                this.message = message;
@SuppressWarnings("serial")
class ExceptionB extends ExceptionA {
//Write constructor of class ExceptionB with super()
        ExceptionB(String message){
                super(message);
        }
@SuppressWarnings("serial")
class ExceptionC extends ExceptionB {
//Write constructor of class ExceptionC with super()
        ExceptionC(String message){
                super(message);
@SuppressWarnings("serial")
public class TestException {
        public static void main(String[] args) {
                try {
                        getExceptionB();
                }
                catch(ExceptionA ea) {
                        System.out.println("Got exception from Exception B");
                }
                try {
                        getExceptionC();
                }
                catch(ExceptionA ea) {
                        System.out.println("Got exception from Exception C");
        public static void getExceptionB() throws ExceptionB {
                throw new ExceptionB("Exception B");
        public static void getExceptionC() throws ExceptionC {
                throw new ExceptionC("Exception C");
        }
}
```

Execution Results - All test cases have succeeded!

Test Case - 1 User Output Got exception from Exception B

S.No: 28	Exp. Name: Stack Implementation	Date: 2024-01-02

Create an interface for stack with push and pop operations. Implement the stack in two ways fixed-size stack and Dynamic stack (stack size is increased when the stack is full).

Note: Please don't change the package name.

Source Code:

q29794/StaticAndDynamicStack.java

ID: 224G1A0502 Page No: 50

```
package q29794;
interface Stack {
        void push(int item);
        int pop();
}
class FixedSizeStack implements Stack {
        private int stck[];
        private int tos;
        FixedSizeStack(int size) {
               stck = new int[size];
               tos = -1;
        }
        // Push an item onto the stack
        public void push(int item) {
                if(tos == stck.length-1) // use length member
                        System.out.println("Stack is full.");
                else
                        stck[++tos] = item;
        }
        // Pop an item from the stack
        public int pop() {
                if(tos < 0) {
                        System.out.println("Stack underflow");
                        return 0;

                        System.out.print("Name:");
                        String st = s1.nextLine();
                        ht.put(i1,st);
                for(Map.Entry m : ht.entrySet()){
                        System.out.println("Rank : "+m.getKey()+"\t\t Name :
"+m.getValue());
        }
```

Execution Results - All test cases have succeeded!

Test Case - 1
User Output
No.Of Mapping Elements in HashTable:
3
Rank:
4
Name:
Robert
Rank:
5
Name:
John
Rank:
6
Name:
Jennifer

Test Case - 2	
User Output	
No.Of Mapping Elements in HashTable:	
3	
Rank:	
1	
Name:	
Jon	
Rank:	
2	
Name:	
Robert	
Rank:	
3	
Name:	
Jennifer	
Rank : 3 Name : Jennifer	
Rank : 2 Name : Robert	
Rank: 1 Name: Jon
